Help Information:

Referrals

This report ranks referring URLs (external web pages) that brought traffic to your site. For Sessions without an external referral, which occurs when a Visitor goes directly to your site via a bookmark/favorite or by typing in the URL directly, the (no referral) entry is incremented. This allows you to compare the percentage of traffic from external links versus Visitors that already know about your site. Click any referring page to view it in a new browser window.

Calculation Methodology

Each session is scanned for an external referral, which is determined using the domains list in the configuration for this site. If an external referral is found, then the base-URL of the referral is entered and incremented. The base-URL does not include query parameters (after the ? query token) which would cause extreme granularity. If no external referral is detected then '(no referral)' is incremented.
