### Help Information:

#### Search Engines

This report lists each Search Engine that referred traffic to your site using a keyword search. By clicking on the arrow next to each entry, you can see the actual Search Terms people typed in. Entries are ranked by the number of Sessions each Search Engine was responsible for.

#### Calculation Methodology

Each session is scanned for an external referral, which is determined using the domains list in the configuration for this site. If an external referral is found, then the query of the referral is scanned for search variables. If a search variable and term is found, then the search domain and term are entered and incremented. The list of search variables can be controlled in Urchin's configuration.
